Dishwashers

Instruction Manual

CDP 4709/CDP 4709X

Read this Manual

This manual contains sections of Safety Instructions,Operating Instructions, Installation Instructions and Troubleshooting Tips etc. Carefully reading it before using the dishwasher will help you to use and maintain the dishwasher properly.

Before Calling for Service

To review the section on Troubleshooting Tips will help you to solve some common problems by yourself and not need to ask for the help of professional technicians.

NOTE:

The manufacturer, following a policy of constant development and up–dating of the product, may make modifications without giving prior notice.

IMPORTANT SAFETY INFORMATION
READ ALL INSTRUCTIONS BEFORE USING

⚠ WARNING!

When using your dishwasher, follow the below basic precautions including the following:

GROUNDING INSTRUCTIONS

- This appliance must be grounded. In the event of a malfunction or breakdown, grounding will reduce the risk of electric shock by providing a path of least resistance of electric current. This appliance is equipped with a cord having an equipment–grounding conductor and a grounding plug. The plug must be plugged into an appropriate outlet that is installed and grounded in accordance with all local codes and ordinances.

⚠ WARNING!

- Improper connection of the equipment–grounding conductor can result in a risk of electric shock. Check with a qualified electrician or service representative if you are in doubt whether the appliance is properly grounded. Do not modify the plug provided with the appliance ;If it is not fit for the outlet .have a proper outlet installed by a qualified electrician.

WARNING! PROPER USE

Do not abuse, sit on, or stand on the door or dish rack of the dishwasher.

Do not touch the heating element during or immediately after use.

Do not wash plastic items unless they are marked dishwasher safe or the equivalent. For plastic items not so marked, check the manufactures recommendations.

Use only detergent and rinse additives designed for an automatic dishwasher. Never use soap , laundry detergent, or hand washing detergent in your dishwasher. Keep these products out of children.

Keep child away from detergent and rinse aid, keep child away from the open door of the dishwasher, there could still be some detergent left inside.

The door should not be left in the open position since this could present a tripping hazards.

During installation, the power supply must not be excessively or dangerously bent or flattened.

Do not tamper with controls.

The appliance is not intended for use by young children or infirm persons without supervision.

Dishwasher detergents are strongly alkaline,they can be extremely dangerous if swallowed.Avoid contact with skin and eyes and keep children away from the dishwasher when the door is open.

Important: when the appliance location is on carpet floors, attention must be paid so as to ensure that there is no obstruction to the bottom vents.

Do not operate your dishwasher unless all enclosure panels are properly inplace. Open the door very carefully if the dishwasher is operating, there is a risk of water squirting out.

Do not place any heavy objects of stand on the door when it is open. The appliance could tip forward.

When loading items to be washed:
1) Locate sharp items so that they are not likely to damage the door seal;
2) Load sharp knives with the handles up to reduce the risk of cut–type injuries.

When using your dishwasher, you should prevent plastic item from contacting with heating element.

If the supply cord is damaged, it must be replaced by the manufacturer or its service agent or a similarly qualified person in order to avoid a hazard.

Please dispose of packing materials properly.

Use the dishwasher only for its intended function.

Remove the door to the washing compartment when removing an old dishwasher from service or discarding it.

Young children should be supervised to ensure that they do not play with the appliance.

Check that the detergent receptable is empty after completion of the wash cycle.

Cutlery is washed best if it is placed in the basket with handles downwards.

Warning:
knives and other utensils with sharp points must be loaded in the basket with their points down or placed in a horizontal position.

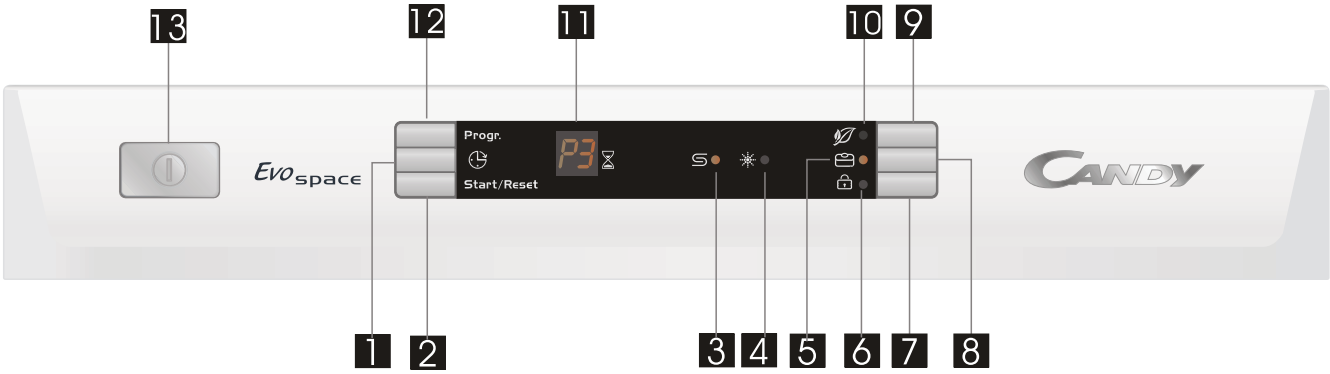

READ AND FOLLOW THIS SAFETY INFORMATION CAREFULLY

SAVE THESE INSTRUCTIONS

IMPORTANT!

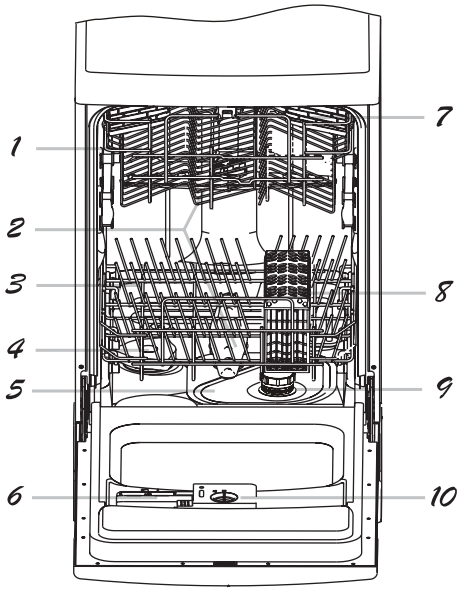

To get the best performance from your dishwasher,read all operating instructions before using it for the first time.

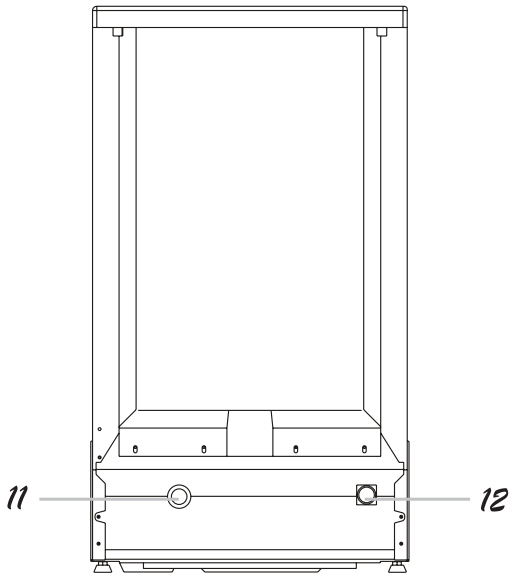

Control Panel

1	Delayed Start Button: press this button to set the delayed hours for washing.	9	Energy saver functions button(Only for program: Intensive/Normal/Economy)
2	Start/Reset Button: press this button to start or pause the dishwasher, the process pilot lamp will be blinking when starting.	10	Energy saver light : come on when energy saver functions button is selected
3	No Salt Indicator Light: comes on when there is not enough salt in the softener (Certain model only).	11	Program indicator light
4	Rinse Aid Indicator Light: lights on when there is not enough rinse agent (certain models only).	12	Program Button: pressed to choose desired program,whose program indicator light will come on.
5	All in1 indicator light : come on when 3in1 functions button is selected	13	Power Switch: turn on/off the power supply.
6	Child lock indicator light : come on when child lock functions button is selected		
7	Child lock functions button Press the button for more than 3 seconds to set or cancel the child lock.		
8	All in1 functions button (only for program:intensive/normal/economy)

Wash Cycle Table

Program	Cycle	Cycle Selection Information	Description of Cycle	Detergent pre/main	Rinse Aid
Intensive		For the heaviest soiled loads, such as pots, pans, casserole dishes and dishes that have been sitting with dried food on them for a while.	Pre-wash Pre-wash (50°C) Wash (70°C) Rinse Rinse (70°C) Drying	4 /23 gr	★
Normal	(EN 50242)	For normally soiled loads, such as pots, plates, glasses and lightly soiled pans. standard daily cycle.	Pre-wash Wash (50°C) Rinse Rinse (60°C) Drying	4 /23 gr	★
Economy	ECO	For lightly soiled loads, such as plates, glasses, bowls and lightly soiled pans.	Pre-wash Wash (50°C) Rinse Rinse (55°C) Drying	4 /23 gr	★
UltraRapid 60	60'	Daily wash in only 1 hour. Suitable for normal soiled dishes that are to be washed straight after a meal (max 6 plate settings).	Pre-wash (30℃) Wash (70℃) Rinse (65℃) Drying	20 gr.	★
Glass		For lightly soiled loads, such as glasses, crystal and fine china.	Wash (45℃) Rinse (65℃) Drying	20 gr.	★
Ultra Rapid 24`	24'	A shorter wash for lightly soiled loads (max 4 plate settings).	Wash (50°C) Rinse (55°C) Drying	15 gr	★
Refresh		To rinse dishes that you plan to wash later that day.	Pre-wash		

Turning on the Appliance

Starting a wash cycle. . .

1. Draw out the lower and upper basket, load the dishes and push them back. It is commended that loading the lower basket first, then the upper one. The expensive and finer chinaware should not be put in.
2. With a little force to ensure the door is properly closed.
   Note: a sound of click could be heard when the door is closed perfectly.
3. Insert the plug into the socket.
   The power supply is 230V 50HZ, the specification of the socket is 250V 10A.
4. According to the soil level to choose the desired program by pressing program selection button.
5. Press the ON/OFF button
6. Press this button to start automatic washing.
7. Press the ON/OFF button at the end of washing. Open the door of dishwasher after waiting 30 minutes.

Change the Programme

Press the Start/Pause button to stop washing.

Press the programme button to select the programme.

Press the Start/Pause button to start washing.

At the end of the wash cycle

At end of washing, the time display will flash for 8 seconds while the buzzer sound. But at the end of delayed washing, no sound of the buzzer, only the flash of the time display.

NOTE: If your model have not water softener, you may skip this section.

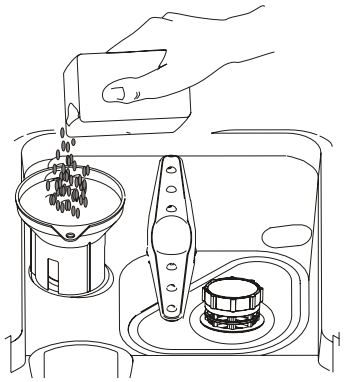

WATER SOFTENER

There are two ways to reduce the water hardness: one way is using water softener, the other is using detergent.

The hardness of the water varies from place to place. If hard water is used in the dishwasher, deposits will form on the dishes and utensils.
The appliances is equipped with a special softener that uses a salt specifically designed to eliminate lime and minerals from the water.

Loading the Salt into the Softener

Always use salt intended for use with dishwashers.
The salt container is located beneath the lower rack and should be filled as follows:

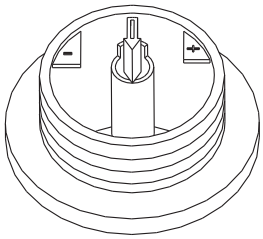

1. Remove the lower basket and then unscrew and remove the cap from the salt container.
2. If you are filling the container for the first time ,fill 2/3 of its volume with water.
3. Place the end of the funnel(supplied) into the hole and introduce about 2kg of salt .It is normal for a small amount of water to come out of the salt container
4. Carefully screw the cap back on.

NOTE:

1. The salt container must be refilled when the salt warning light comes on. Though the salt container is filled enough, the indicator light may not black out before the salt fully dissolve.
2. If there are spills of the salt, a soak program could be run to wipe them out.

Adjusting Salt Consumption

The dishwasher is designed to allow for adjusting the amount of salt consumed based on the hardness of the water used.
This is intended to optimize and customize the level of salt consumption so that the salt consumption could be set proceed as follows:

1. Unscrew the cap from the salt container.
2. There is a ring on the container with an arrow on it (see Figure to the side), if necessary, rotate the ring in the anticlockwise direction from the "–" Setting toward the "+" sign, based on the hardness of the water being used.It is recommended that adjustments should be made in accordance with the following schema:

WATER HARDNESS			Selector Position	Salt consumption (gram/cycle)	Auto nomy (cycles/2kgs)
°fH	°dH	mmol/l			
0~10	0–5	0–1.0	–	0	/
10~25	5–14	1.0–2.5	/	20	60
25~50	14–28	2.5–5.0	MED	40	40
>50	>28	>5.0	+	60	25

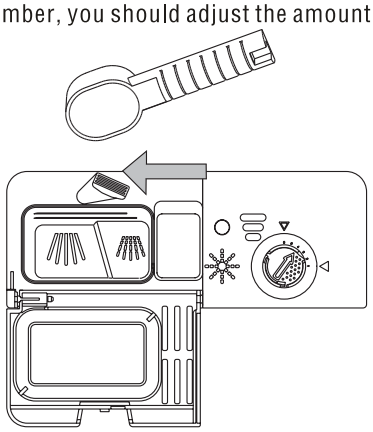

Contact your local water board for information on the hardness of your water supply.

DETERGENT DISPENSER

YOU MAY NOT ADD TOO MUCH DETERGENT TO PREVENT THE FORMATION OF DEPOSITS BECAUSE YOUR DISHWASHERS HAVE SPECIALLY–DESIGNED WATER SOFTENERS.
The dispenser must be refilled before the start of each wash cycle following the instructions provided in the" Wash Cycle Table".Your dishwashers use less detergent and rinse aid than conventional dishwashers. Generally, only one tablespoon of detergent is needed for a normal wash load. Also, more heavily soiled items need more detergent. Always add the detergent just before starting dishwasher, otherwise it could get damp and will not dissolve properly.

Amount of Detergent to Use

IF THE WATER ISN'T TOO HARD, YOU MAY ALSO PREVENT THE FORMATION OF DEPOSITS BY ADDING DETERGENT.
The amount of detergent needed can vary due to differences in water hardness. To determine the water hardness in your area, contact your local water utility or area water softening company. The harder the water, the more detergent you may need. Remember, you should adjust the amount of detergent you use by small amounts until you find the correct amount.

⚠WARNING!

Dishwasher detergent is corrosive! Take care to keep it out of reach of children.

Removing Hard Water Spots

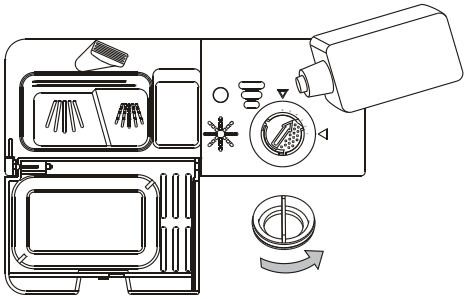

To remove hard water spots, try the following:
- Run dishes through a normal wash program.
- Remove all metal dishware, such as cutlery, pans, etc., from the dishwasher.
- Do not add detergent.
- Pour two cups of vinegar into a bowl and set the bowl face up on the lower rack of the dishwasher.
- Run the dishes through a normal wash program.

If this doesn't work, try the same process with 1 / 4 cup of citric acid crystals instead of vinegar.

Proper Use of Detergent

Use only detergent specifically made for use in dishwashers. Keep your detergent fresh and dry. Don't put powder detergent into the dispenser until You're ready to wash dishes.

RINSE AID DISPENSER

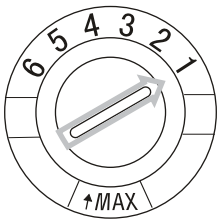

- To open the dispenser, turn the cap to the "open" (left) arrow and lift it out.
- Pour the rinse aid into the dispenser, being careful not to overfill.
- Replace the cap by inserting it aligned with "open" arrow and turning it to the closed (right) arrow.

The rinse aid is released during the final rinse to prevent water from forming droplets on your dishes that can leave spots and streaks. It also improves drying by allowing water to "sheet" off the dishes.

Your dishwashers are designed to use liquid rinse aids. The rinse aid dispenser is located inside the door next to the detergent dispenser. To fill the dispenser, open the cap and pour the rinse aid into the dispenser until the level indicator turns completely black. The dispenser holds about 100 ml of liquid rinse aid.

Be careful not to overfill the dispenser, because this could cause oversudsing. Wipe away any spills with a damp cloth. Don't forget to replace the cap before you close the dishwasher door.
If you have soft water, you may not need rinse aid for it may cause a white film to develop on your dishes.

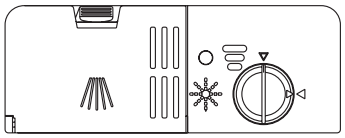

Adjusting Rinse Aid Dispenser

A measured amount of rinse aid is released during the final rinse. As with detergent, the amount of rinse aid needed for your dishes depends on the hardness of the water in your area. Too much rinse aid can result in lather of foaming and cause cloudiness or steaks on your dishes. If the water in your area is very soft, you may not need rinse aid. If you do,you can dilute the rinse aid with an equal amount of water.
The rinse aid dispenser has six settings. Always start with the dispenser set on " 1 ". If spots and poor drying are problems, increase the amount of rinse aid dispensed by removing the dispenser lid and rotating the dial to "2". If the dishes still are not drying properly or are spotted, adjust the dial to the next higher number until your dishes are spot–free. We suggest you to set on "4" .
(If only four settings we suggest you to set on "2".)
In accorance with En50242 standard, the dispenser should be set on the maximum lever when doing the performance.

When to Refill the Rinse Aid Dispenser

If there is no rinse aid warning light in the control panel, you can judge the amount of rinse aid by the following means. The black dot on the rinse aid dispenser indicates the amount of rinse aid in the dispenser. As the rinse aid diminishes, the size of the black dot decreases. You should never let the rinse aid get below 1 / 4 full.

As the rinse aid diminishes, the size of the black dot on the rinse aid level indicator changes, as illustrated below.

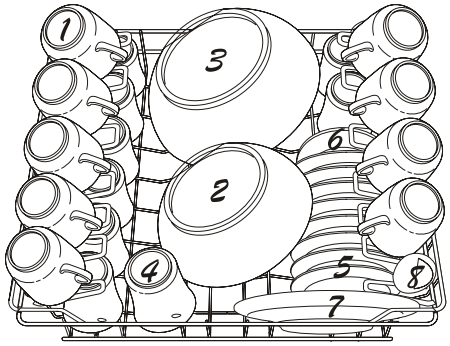

- ● Full
- ◉ 3 / 4 full
- ◉ 1 / 2 full
- ⊙ 1 / 4 full – Should refill to eliminate spotting
- ○ Empty

Loading the Dishwasher Racks.

For best performance of the dishwasher, follow these loading guidelines. Features and appearance of racks and silverware baskets may vary from your model.

How to use the Upper Rack

The upper rack is designed to hold more delicate and lighter dishware such as glasses, coffee and tea cup and saucers, as well as plates, small bowls and shallow pans(as long as they are not too dirty).
Position the dishes and cookware so that they do not get moved by the spray of water.
The upper rack can be adjusted for height by putting wheels of different height into the rails.

1 Cups

2 Small serving bowl

3 Large serving bowl

4 Glasses

5 Saucers

6 Dish

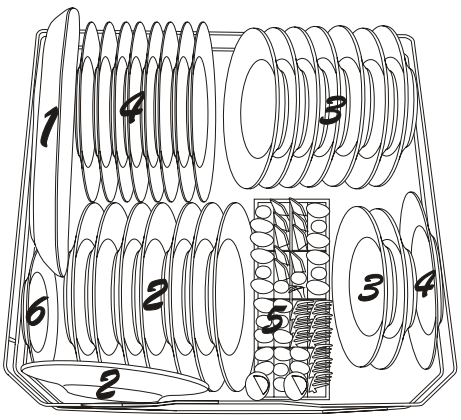

7 Dessert dishes

8 Gravy ladle

How to use the Lower Rack

We recommend that you place large items which are most difficult to clean into the lower rack: pots, pans, lids, serving dishes and bowls, as shown in the figure to the right.
It is preferable to place serving dishes and lids on the side of the racks in order to avoid blocking the rotation of the top spray arm.

- Pots, serving bowls, etc, must always be placed top down.
- Deep pots should be slanted to allow water to flow out.
- The bottom rack feature fold down tine rows so that larger or more pots and pans can be loaded.

1 Oval platter

2 Dessert dishes

3 Soup plates

4 Dinner plates

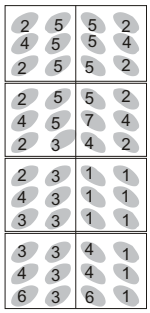

5 Silverware basket

6 Saucers

SILVERWARE BASKET

Silverware should be placed in the silverware basket with handles at the bottom: If the rack has side baskets, the spoon should be loaded individually into the appropriate slots, Especially long utensils should be placed in the horizontal position at the front of the upper rack.

IN

1 Forks
2 Soup spoons
3 Dessert spoons
4 Teaspoons
5 Knives
6 Serving spoons
7 Serving forks

⚠ WARNING!

Do not leave any item extend through bottom. Knives and other utensils with sharp points must be loaded in the basket with their points down or placed in an horizontal position.

Turning on the Appliance

Starting a wash cycle. . .

1 Make sure that the plug of the appliance is inserted into the wall socket.
2 Make sure that the water supply is turned on to full pressure.
3 Load the dishwasher(see the section entitled, " Loading the Dishwasher ").
4 Pour in the detergent(see the section entitled, " Salt, Detergent and Rinse Aid ").
5 Close the door, press the ON/OFF button and the indicator light will on.
6 Press the "prog key–press" to select the "wash cycle".(see the section entitled."wash cycle table".)
7 Press the Start/Reset button, the washing will start after ten seconds.
8 Press the key to set the delay start time. This dishwasher can be delayed to start for 3 hours, 6 hours or 9 hours,and the delay indecator light will on.If you want to cancel the delay start, just press the key to make the delay indicator light to be off.

Cancelling or modifying a wash setting. . .

Premise: A cycle that is underway can only be modified if it has been running for a short time. Otherwise, the detergent may have already been released, and the appliance may have already drained the wash water. If this is the case, the detergent dispenser must be refilled (see the paragraph entitled " Loading the Detergent ").

Hold the “Prog” button down for at lease 5 seconds (the running programme will be cancelled). At this point a new programme can be selected.

Forget to Add a Dish?

A forgotten dish can be added any time before the detergent cup opens.

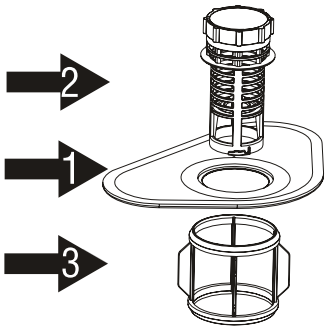

1 Open the door a little to stop the washing.
2 After the spray arms stop working,you can open the door completely.
3 Add forgotten dishes.
4 Close the door, the dishwasher will work after ten second.

⚠ WARNING!

It is dangerous to open the door when washing, because the hot water may be scalded to you. The door should not be left in the open position since this could present a tripping hazard.

Filtering System

For your convenience, we have placed the drain pump and filtering system within easy reach inside the tub. There are three components of the filtering system: the main filter, the coarse filter, and the fine filter.

1 Main filter
Food and soil particles trapped by this filter are pulverized by a special jet on the lower spray arm and washed down the drain.

2 Coarse filter
Larger items, such as pieces of bone or glass, that could clog the drain are trapped in the coarse filter. To remove an item caught in this filter, gently squeeze the tabs on top of this filter and lift it out.

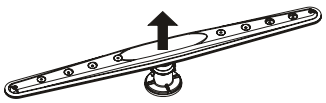

3 Fine filter
This filter holds soil and food residue in the sump area and prevents it from being redeposited on the dishes during a cycle.

Caring for the Dishwasher

To clean the control panel use a lightly dampened cloth then dry thoroughly. To clean the dishwasher outside, do not use solvents (degreasing action) neither abrasives, but only a cloth soaked with water.

Never use sharp objects, scouring pads or harsh cleaners on any part of the dishwasher.

Protect Against Freezing

If your dishwasher is left in an unheated place during the winter, ask a service technician to:

1 Cut off electrical power to the dishwasher. Remove fuses or trip circuit breaker.

2 Turn off the water supply and disconnect the water inlet pipe from the water valve.

3 Drain water from the inlet pipe and water valve. (Use a pan to catch the water.)

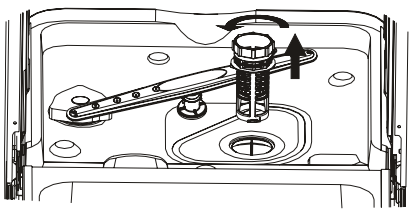

4 Reconnect the water inlet pipe to the water valve.

5 Remove the plastic sump cover in the tub the bottom and use a sponge to soak up water in rubber boot.

Cleaning the Spray Arms

It is necessary to clean the spray arms regularly for hard water chemicals will clog the spray arm jets and bearings. To remove the spray arm, screw off the nut to take out the washer on top of the spray arm and remove the arm. Wash the arms in soapy and warm water and use a soft brush to clean the jets. Replace them after rinsing them thoroughly.

Cleaning the Filters

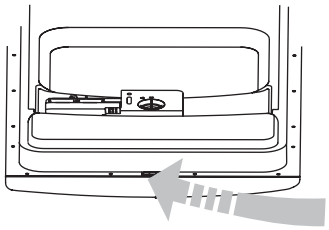

Filter assembly
For best performance and results, the filter assembly must be cleaned.
The filter efficiently removes food particles from the wash water, allowing it to be recirculated during the cycle. For this reason, it is a good idea to remove the larger food particles trapped in the filter after each wash cycle by rinsing the semicircular filter and cup under running water. To remove the filter assembly, pull on the cup handle in the upward direction. The entire filter assembly should be cleaned at least once a month.
To clean the coarse filter and the fine filter, use a cleaning brush. Then, reassemble the filter parts as shown in the figures left and reinsert the entire assembly in the dishwasher, positioning in its seat and pressing downward.
The dishwasher must never be used without the filters. Improper replacement of the filter may reduce the performance level of the appliance and damage dishes and utensils.

⚠ WARNING!

Never run the dishwasher without the filters in place.

Cleaning the Door

To clean the edge around the door, you should use only a soft warm, damp rag. To prevent penetration of water into the door lock and electrical components, do not use a spray cleaner of any kind.
Also, never use abrasive cleaners or scouring pads on the outer surfaces because they will scratch the finish. Some papers towels can also scratch or leave marks on the surface.

⚠ WARNING!

Never use a spray cleaner to clean the door panel for it could damage the door lock and electrical components. It is not allowed to use the abrasive agent or some paper towel becauseof the risk of scratching or leaving spots on the stainless steel surface.

How to Keep Your Dishwasher in Shape

After Every Wash

After every wash, turn off the water supply to the appliance and leave the door slightly ajar so that moisture and odors are not trapped inside.

Remove the Plug

Before cleaning or performing maintenance, always remove the plug from the socket. Do not run risks.

No Solvents or Abrasive Cleaning

To clean the exterior and rubber parts of the dishwasher, do not use solvents or abrasive cleaning products. Rather, use only a cloth and warm soapy water.
To remove spots or stains from the surface of the interior, use a cloth dampened with water and a little white vinegar, or a cleaning product made specifically for dishwashers.

When You Go on Holiday

When you go on holiday, it is recommened that you run a wash cycle with the dishwasher empty and then remove the plug from the socket, turn off the water supply and leave the door of the appliance slightly ajar. This will help the seals last longer and prevent odors from forming within the appliance.

Moving the Appliance

If the appliance must be moved, try to keep it in the vertical position.If absolutely necessary, it can be positioned on its back.

Seals

One of the factors that cause odors to form in the dishwasher is food that remains trapped in the seals. Periodic cleaning with a damp sponge will prevent this from occurring.

About Electricity Connecting

⚠ CAUTION, *for personal safety:*

DO NOT USE AN EXTENSION CORD OR AN ADAPTER PLUG WITH THIS APPLIANCE.

DO NOT, UNDER ANY CIRCUMSTANCES, CUT OR REMOVE THE THIRD GROUNDING PRONG FROM THE POWER CORD.

Electrical Requirements

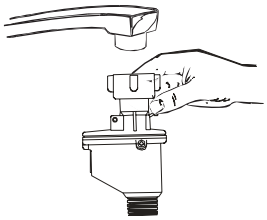

This dishwasher is designed for operation on an adequately wired individual 220~240VAC,50~60HZ. Use required fuse 10 amp. Fused electrical supply is required–copper wire only. Time delay fuse or circuit breaker recommended and provide separate circuit serving only this appliance. Outlet should be placed in adjacent cabinet.Make sure that plug on the appliance remains eccessible after installation.

Electrical Connection

⚠ *Insure proper ground exists before use*

After making sure that the voltage and the frequency values for the current in the home correspond to those on the rating plate and that the electrical system is sized for the maximum voltage on the rating plate, insert the plug into an electrical socket which is earthed properly. If the electrical socket to which the appliance must be connected is not appropriate for the plug , replace the socket, installed by qualified electrician, rather then using an adaptors or the like as they could cause overheating and burns.

How to Connect the safety supply hose

The appliance must be connected to the water mains using new hose–sets.
The old hose–sets should not be reused.

Water pressure must be between 0,04 MPa and 1 MPa. If the pressure is below the minimum consult our Service Department for advice.

1 Pull The safety supply hoses completely out from storage compartment located at rear of dishwasher.

2 Tighter the screws of the safety supply hose to the faucet with thread 3/4inch.

3 Turn water fully on before starting the dishwasher.

ABOUT THE SAFETY SUPPLY HOSE.

The safety supply hose consists of the double walls. The hose's system guarantees its intervention by blocking the flow of water in case of the supply hose breaking and when the air space between the supply hose itself and the outer corrugated hose is full of water.

⚠ WARNING!

A hose that attaches to a sink spray can burst if it is installed on the same water line as the dishwasher. If your sink has one, it is recommended thet the hose be disconnected and the hole plugged.

How to Disconnect the safety supply hose

1 Turn off the water.

2 Release the water pressure by depressing the pressure release button. This relieves water pressure and protects you, and the room, from severe splashing.

3 Unscrew The safety supply hose from the faucet..

How to Disconnect the Dishwasher

1 Remove the power cord plug from the wall receptacle.

2 Disconnect Unicouple from faucet adapter.

NOTE: *When motor stops at the end of the final rinse, the Unicouple can be disconnected and returned to storage.*

COLD WATER CONNECTION

Connect the cold water supply hose to a threaded 3/4(inch) connector and make sure that it is fastened tightly in place. If the water pipes are new or have not been used for an extended period of time, let the water run to make sure that the water is clear and free of impurities. If this precaution is not taken, there is a risk that the water inlet can get blocked and damage the appliance.

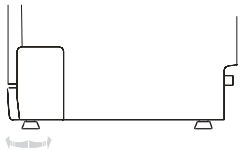

HOT WATER CONNECTION

The water supply to the appliance can also be connected to the house hot water line (centralized system, heating system), as long as it does not exceed a temperature of 60 C. In this case, the wash cycle time will be shortened by about 15 minutes and the wash efficiency slightly reduced.
The connection must be made to the hot water line following the same procedures as those for the connection to the cold water line.

Positioning the Appliance

Position the appliance in the desired location. The back should rest against the wall behind it, and the sides, along the adjacent cabinets or wall. The dishwasher is equipped with water supply and drain hoses that can be positioned to the right or the left to facilitate proper installation.

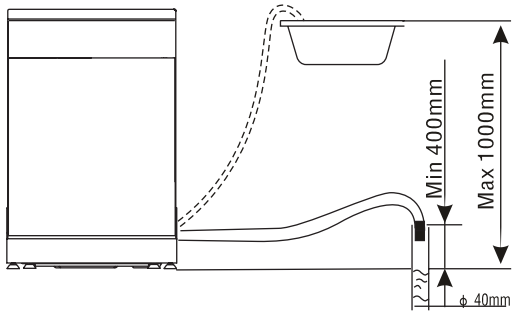

Levelling the Appliance

Once the appliance is positioned,adjust the feet (screwing them in or out) to adjust the height of the dishwasher, making it level. In any case ,the appliance should not be inclined more than 2° .

Drain hose Connection

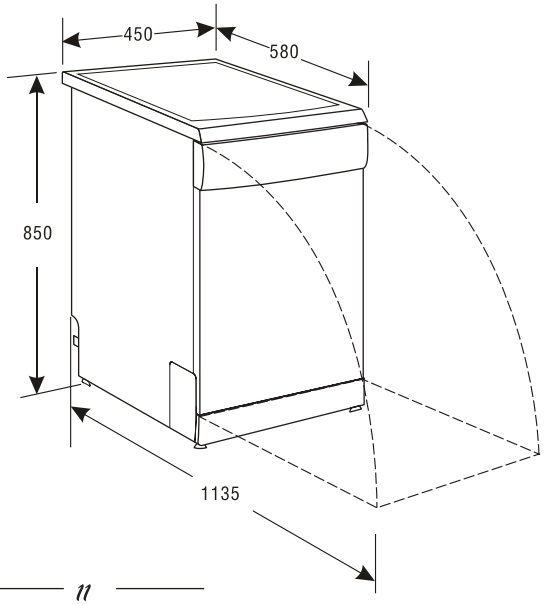

Insert the drain hose into a drain pipe with a minimum diameter of 4 cm, or let it run into the sink, making sure to avoid bending or crimping it. Use the special plastic support that comes with the appliance. The free end of the hose must be at a height between 40 and 100cm and must not be immersed in water.

How to Drain Excess Water From Unicouple Hoses

If the sink is 34 or higher from the floor, the excesswater in Unicouple hoses cannot be drained directly into the sink. It will be necessary to drain excess water from hoses into a bowl or suitable container that is heldoutside and lower than the sink.

DIMENSIONS(mm)

Before Calling for service . . .

Troubleshooting Tips
Review the charts on the following pages may make you be free of calling for service.

Problem	Possible Causes	What To Do
Dishwasher doesn't run	Fuse blown, or the circuit breaker acted	Replace fuse or reset circuit breaker. Remove any other appliances sharing the same circuit with the dishwasher
	Power supply is not turned on	Make sure the dishwasher is turned on and the door is closed securely. Make sure the power cord is properly plugged into the wall socket.
	Water pressure is low	Check that the water supply is connected properly and the water is turned on.
Drain pump doesn't stop	Overflow	The system is designed to detect an overflow. When it does, it shuts off the circulation pump and turns on the drain pump.
Noise	Some audible sounds are normal	Sound from soft food shredding action and detergent cup opening.
	Utensils are not secure in the baskets or something small has dropped into the basket	To ensure everything is secured in the dishwasher.
	Motor hums	Dishwasher has not been used regularly. If you do not use it often, remember to set it to fill and pump out every week, which will help keep the seal moist.
Suds in the tub	Improper detergent	Use only the special dishwasher detergent to avoid suds. If this occurs, open the dishwasher and let suds evaporate. Add 1 gallon of cold water to the tub. Close and latch the dishwasher, then drain out the water by slowly turning the Dial until a drain period is reached. Repeat if necessary.
	Spilled rinse agent	Always wipe up rinse agent spills immediately.
Stained tub interior	Detergent with colorant was used	Make sure that the detergent is the one without colorant.
Dishes are not dried	Rinse agent dispenser is empty	Make sure that the rinse agent dispense is filled.
Dishes and flatware not clean	Improper program	Select stronger program
	Improper rack loading	Make sure that the action of the detergent dispenser and spray arms are not blocked by large dishware.
Spots and filming on glasses and flatware	1 Extremely hard water 2 Low inlet temperature 3 Overloading the dishwasher 4 Improper loading 5 Old or damp powder detergent 6 Empty rinse agent dispenser 7 Incorrect dosage of detergent	To remove spots from glassware: 1 Take out all metal utensils out of the dishwasher. 2 Do not add detergent. 3 Choose the longest cycle. 4 Start the dishwasher and allow it to run for about 18 to 22 minutes, then it will be in the main wash. 5 Open the door to pour 2 cups of white vinegar into the bottom of the dishwasher. 6 Close the door and let the dishwasher complete the cycle. If the vinegar does not work: Repeat as above, except use 1/4 cup (60 ml)of citric acid crystals instead of vinegar.

Before calling for service . . .

Problem	Possible Causes	What To Do
Cloudiness on glassware	Combination of soft water and too much detergent	Use less detergent if you have soft water and select a shortest cycle to wash the glassware and to get them clean.
Yellow or brown film on inside surfaces	Tea or coffee stains	using a solution of 1/2 cup of bleach and 3 cups warm water to remove the stains by hand. ⚠ *WARNING* You have to wait for 20 minutes after a cycle to let the heating elements cool down before cleaning interior; otherwise, burns will happen.
	Iron deposits in water can cause an overall film	You have to call a water softener company for a special filter.
White film on inside surface	Hard water minerals	To clean the interior, use a damp sponge with dishwasher detergent and wear rubber gloves. Never use any other cleaner than dishwasher detergent for the risk of foaming or suds.
Detergent cup lid won't latch	Dial is not in the OFF position	Turn the Dial to OFF position and slide the door latch to the left.
Detergent left in dispenser cups	Dishes block detergent cups	Re–loading the dishes properly.
Steam	Normal phenomenon	There is some steam coming through the vent by the door latch during drying and water draining.
Black or gray marks on dishes	Aluminum utensils have rubbed against dishes	Use a mild abrasive cleaner to eliminate those marks.
Water standing in the bottom of the tub	This is normal	A small amount of clean water around the outlet on the tub bottom at the back of the tub keeps the water seal lubricated.
Dishwasher leaks	Overfill dispenser or rinse aid spills	Be careful not to overfill the rinse aid dispenser. Spilled rinse aid could cause oversudsing and lead to overflowing. Wipe away any spills with a damp cloth.
	Dishwasher isn't level	Make sure the dishwasher is level.

ERROR CODES

Codes	Meanings	Possible Causes
E1	Longer inlet time.	Faucets is not opened.
E4	Overfilled.	Too much inlet water. .

WARNING!

If overflow occors, turn off the main water supply before calling a service. If there is water in the base pan because of an overfill or small leak, the water should be removed before restarting the dishwasher.
